

First / Second Semester B.E. Degree Supplementary Examination,
June / July - 2024

COMPUTER AIDED ENGINEERING DRAWING

Time: 3 Hours (COMMON TO ALL BRANCHES) Max.Marks:100

Note: 1. Answer all four full questions.

2. Grid sheets may be provided for making preparatory sketches.

Q. No.	Module – 1	Marks
1	A hexagonal lamina of 30 mm side rests on one of its sides on HP. The lamina makes 30° to HP and the side on which it rests makes 45° to VP. Draw its projections.	20
Module – 2		
2	A cone of base diameter 40 mm and axis length 50 mm is resting on HP on a point on the circumference of its base such that its apex is at 40 mm above the HP and its top view of the axis is inclined at 60° to VP. Draw the top and front views of the solid. Also, determine the inclinations of the axis with HP when the base is nearer to the observer.	30
Module – 3		
3	Using first angle projection, draw front view looking in the direction of arrow shown, top view and right side view of the machine component as shown in figure Q(3) 	25
Module - 4		
4	A rectangular prism of base 30 mm x 20 mm and height 60 mm rests on HP on its base with the longer base side inclined at 40° to VP. It is cut by a plane inclined at 45° to HP, perpendicular to VP and bisects the axis. Draw the development of lateral surface of the prism.	25

COMPUTER AIDED ENGINEERING DRAWING

Time: 3 Hours

(COMMON TO ALL BRANCHES)

Max.Marks:100

Note: 1. Answer all four full questions.

2. Grid sheets may be provided for making preparatory sketches.

Module – 1	
Q.	Marks
A regular hexagonal lamina of sides 30mm is lying in such a way that one of its sides touches both the reference planes. If the lamina makes 60° with HP, draw the projections of the lamina.	20
Module – 2	
A cube of 40 mm sides rests on HP on an edge which is inclined to VP at 30° . Draw the projections when the lateral square face containing the edge on which it rests makes an angle of 50° to HP.	30
Module – 3	
A cone of base diameter 30 mm and height 40 mm rests centrally over a cube of side 50 mm. Draw the isometric projection of the combination of solids.	25
Module – 4	
A square prism of base sides 30 mm and axis length 60 mm is resting on HP with all the vertical faces equally inclined to VP. It is cut by an inclined plane 60° to HP and perpendicular to VP and is passing through a point on the axis at a distance of 50 mm from the base. Obtain the development for the truncated portion of the solid.	25
