Algorithm for Binary tree traversal...

Binary tree traversal have three properties

→ Preorder
→ Inorder
→ Postorder

I Algorithm preorder(root)

```
if (root ≠ null)
print info(root)
preorder(left(root))
preorder(right(root))
end if
```

II Algorithm inorder(root)

```
if (root ≠ null)
inorder(left(root))
Printf (info(root))
inorder(right(root))
end if
```

III Algorithm postorder(root)

```
if(root ≠ null)
postorder(left(root))
postorder(right(root))
printf(info(root))
```
